National foreword

This British Standard is the UK implementation of EN ISO 4064-4:2014. Together with BS EN ISO 4064-1:2014 it supersedes BS EN 14154-1:2005+A2:2011, which is withdrawn.

The UK participation in its preparation was entrusted by Technical Committee CPI/30, Measurement of fluid flow in closed conduits, to Subcommittee CPI/30/7, Volume flow-rate methods.

A list of organizations represented on this subcommittee can be obtained on request to its secretary.

This publication does not purport to include all the necessary provisions of a contract. Users are responsible for its correct application.

This European Standard was approved by CEN on 21 September 2013.

CEN members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration. Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the CEN-CENELEC Management Centre or to any CEN member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CEN member into its own language and notified to the CEN-CENELEC Management Centre has the same status as the official versions.

CEN members are the national standards bodies of Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and United Kingdom.

Foreword

This document (EN ISO 4064-4:2014) has been prepared by Technical Committee ISO/TC 30 “Measurement of fluid flow in closed conduits” in collaboration with Technical Committee CEN/TC 92 “Water meters” the secretariat of which is held by SNV.

This European Standard shall be given the status of a national standard, either by publication of an identical text or by endorsement, at the latest by December 2014, and conflicting national standards shall be withdrawn at the latest by June 2017.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. CEN [and/or CENELEC] shall not be held responsible for identifying any or all such patent rights.

This document supersedes EN 14154-1:2005+A2:2011.

This document has been prepared under a mandate given to CEN by the European Commission and the European Free Trade Association.

According to the CEN-CENELEC Internal Regulations, the national standards organizations of the following countries are bound to implement this European Standard: Austria, Belgium, Bulgaria, Croatia, Cyprus, Czech Republic, Denmark, Estonia, Finland, Former Yugoslav Republic of Macedonia, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland, Turkey and the United Kingdom.

Endorsement notice

The text of ISO 4064-4:2014 has been approved by CEN as EN ISO 4064-4:2014 without any modification.

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards bodies (ISO member bodies). The work of preparing International Standards is normally carried out through ISO technical committees. Each member body interested in a subject for which a technical committee has been established has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work. ISO collaborates closely with the International Electrotechnical Commission (IEC) on all matters of electrotechnical standardization.

The procedures used to develop this document and those intended for its further maintenance are described in the ISO/IEC Directives, Part 1. In particular the different approval criteria needed for the different types of ISO documents should be noted. This document was drafted in accordance with the editorial rules of the ISO/IEC Directives, Part 2, www.iso.org/directives.

Attention is drawn to the possibility that some of the elements of this document may be the subject of patent rights. ISO shall not be held responsible for identifying any or all such patent rights. Details of any patent rights identified during the development of the document will be in the Introduction and/or on the ISO list of patent declarations received, www.iso.org/patents.

Any trade name used in this document is information given for the convenience of users and does not constitute an endorsement.

The committee responsible for this document is ISO/TC 30, *Measurement of fluid flow in closed conduits*, Subcommittee SC 7, *Volume methods including water meters*.

ISO 4064 consists of the following parts, under the general title *Water meters for cold potable water and hot water*:

- *Part 1: Metrological and technical requirements*
- *Part 2: Test methods*
- *Part 3: Test report format*
- *Part 4: Non-metrological requirements not covered in ISO 4064-1*
- *Part 5: Installation requirements*

Water meters for cold potable water and hot water —

Part 4:

Non-metrological requirements not covered in ISO 4064-1

1 Scope

This part of ISO 4064 applies to water meters used to meter the volume of cold potable water and hot water flowing through a fully charged, closed conduit. These water meters incorporate devices which indicate the integrated volume.

This part of ISO 4064 specifies technical characteristics and pressure loss requirements for meters for cold potable water and hot water. It applies to water meters which can withstand:

- a) a maximum admissible pressure (MAP) equal to at least 1 MPa¹⁾ [0,6 MPa for meters for use with pipe nominal diameters (DNs) ≥ 500 mm];
- b) a maximum admissible temperature (MAT) for cold potable water meters of 30 °C;
- c) a MAT for hot water meters of up to 180 °C, depending on class.

In addition to meters based on mechanical principles, this part of ISO 4064 also applies to water meters based on electrical or electronic principles, and to water meters based on mechanical principles incorporating electronic devices, used to meter the volume flow of hot water and cold potable water. It also applies to electronic ancillary devices. As a rule ancillary devices are optional. However, national or international regulations may make some ancillary devices mandatory in relation to the utilization of the water meter.

2 Normative references

The following documents, in whole or in part, are normatively referenced in this document and are indispensable for its application. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.

ISO 228-1, Pipe threads where pressure-tight joints are not made on the threads — Part 1: Dimensions, tolerances and designation

ISO 4064-1|OIML R 49-1, Water meters for cold potable water and hot water — Part 1: Metrological and technical requirements

ISO 7005-2, *Metallic flanges — Part 2: Cast iron flanges*

ISO 7005-3, *Metallic flanges — Part 3: Copper alloy and composite flanges*

3 Terms and definitions

For the purposes of this document, the terms and definitions given in ISO 4064-1|OIML R 49-1 apply.

NOTE Many of the definitions used in this part of ISO 4064 conform to ISO/IEC Guide 99:2007|OIML V 2-200:2012,^[1] OIML V 1:2013,^[2] and OIML D 11.^[3]

1) 1 MPa = 10 bar

4 Technical characteristics

4.1 In-line meters

4.1.1 Meter size and overall dimensions

Meter size is characterized either by the thread size of the end connections or by the nominal size of the flange. For each meter size, there is a corresponding fixed set of overall dimensions. The dimensions of the meter, as illustrated in [Figure 1](#), shall be in accordance with [Table 1](#).

Key

W_1, W_2 $W_1 + W_2$ is the width of a cuboid within which the water meter can be contained

H_1, H_2 $H_1 + H_2$ is the height of a cuboid within which the water meter can be contained

L length of a cuboid within which the water meter can be contained

NOTE The cover is at right angles to its closed position. Dimensions H_1 , H_2 , W_1 and W_2 are maxima; L is a fixed value with specified tolerances.

a Pipe axis.

Figure 1 — Meter size and overall dimensions

4.1.2 Threaded connection

Permissible values of dimensions a and b for threaded connections are given in [Table 1](#). Threads shall conform to ISO 228-1. [Figure 2](#) defines dimensions a and b .

Figure 2 — Threaded connection

4.1.3 Flanged connection

Flanged end connections shall conform to ISO 7005-2 and ISO 7005-3 for the maximum pressure corresponding to that of the water meter. Dimensions shall be as given in [Table 1](#).

The manufacturer shall provide a reasonable clearance behind the rear face of the flange to allow access for installation and removal.

Table 1 — Water meter dimensions for threaded and flanged connections

Dimensions in millimetres

>800			1,25× DN	DN	0,65× DN	0,65× DN	0,75× DN

^a Nominal size of flanges and threaded connections.

^b Tolerance on length: DN 15 to 40 — L_{-2}^0 ; DN 50 to 300 — L_{-3}^0 ; DN 350 to 400 — L_{-5}^0 . Tolerances on lengths of meters greater than DN 400 should be agreed between the user and manufacturer.

^c For DN 15 meters of length 80 mm or 85 mm, $a_{\min} = b_{\min} = 7,5$ mm.

4.1.4 Combination meter connection

Dimensions shall be as set out in [Table 2](#).

The overall length of a combination meter may be a fixed dimension or may be adjustable by means of a sliding coupling. In this case, the minimum possible adjustment of the meter overall length shall be 15 mm relative to the nominal value of L defined in [Table 2](#).

At the time of publication, because of the wide variation in the height of the various types of combination meters, it has not been possible to standardize this dimension.

Table 2 — Combination water meter with flanged end connections

Dimensions in millimetres

DN ^a size	Preferred values of L	Alternative values of L	W_1, W_2
50	300	270, 432, 560, 600	220

125	350	850	350
150	500	610, 1000	400
200	500	1160, 1200	400
^a Nominal size of flange connection.			

4.2 Concentric and cartridge meters and exchangeable metrological modules

NOTE 1 This subclause contains the necessary information on meter size and overall dimensions. Two meter manifold connection designs are shown in [Annex A](#).

NOTE 2 It is possible that this subclause and [Annex A](#) will be subject to change as concentric water meter and manifold designs evolve.

4.2.1 Meter size and overall dimensions

Dimensions for a current meter design are shown in [Figure 3](#) and [Table 3](#).

4.2.2 Design of the meter manifold connection

The meter connection shall be designed to connect the meter, using the screw thread provided, to a manifold having this design of face. Suitable seals shall ensure that no leaks occur between the inlet connection and the meter/manifold exterior or between the inlet and outlet passages at the meter/manifold interface.

4.2.3 Dimensions of concentric and cartridge meters

4.2.3.1 General

Dimensions for concentric and cartridge meters are defined by a cylinder into which the meter fits — see [Figure 3](#), in which J and K define respectively the height and diameter of a cylinder enclosing the meter.

Figure 3 — Concentric and cartridge meter dimensions

NOTE Where there is a separate indicating device or calculator, the overall size specified in [Figure 3](#) applies only to the housing of the measurement transducer.

4.2.3.2 Concentric meters

Dimensions for concentric meters are specified in [Table 3](#).

Table 3 — Concentric meter dimensions

Dimensions in millimetres

Type	Maximum ϕD	Maximum J	Maximum ϕK
1	(G 1½ B) ^a	220	110

Annex A (informative)

Concentric water meter manifold

A.1 General

At the time of publication of this part of ISO 4064, an International Standard for the connections to concentric water meters does not exist. This annex contains the necessary information to design and construct the meter manifold connection and refers to any relevant sources of information. This annex is subject to expansion as other manifold designs are submitted for inclusion.

A.2 Concentric water meter manifold design

The design of two manifold interfaces is shown in [Figures A.1](#) and [A.2](#) (see also [Table 3](#)).

The meter connection should be designed to connect the meter, using the screw thread provided, to a manifold having this design of face. Suitable seals should ensure that no leaks occur between the inlet connection and the meter/manifold exterior or between the inlet and outlet passages at the meter/manifold interface.

NOTE ISO 4064-2/OIML R 49-2 refers to the additional pressure tests to be passed by this meter type.

BSI is incorporated by Royal Charter. British Standards and other standardization products are published by BSI Standards Limited.

About us

We bring together business, industry, government, consumers, innovators and others to shape their combined experience and expertise into standards-based solutions.

The knowledge embodied in our standards has been carefully assembled in a dependable format and refined through our open consultation process. Organizations of all sizes and across all sectors choose standards to help them achieve their goals.

Information on standards

We can provide you with the knowledge that your organization needs to succeed. Find out more about British Standards by visiting our website at bsigroup.com/standards or contacting our Customer Services team or Knowledge Centre.

Buying standards

You can buy and download PDF versions of BSI publications, including British and adopted European and international standards, through our website at bsigroup.com/shop, where hard copies can also be purchased.

If you need international and foreign standards from other Standards Development Organizations, hard copies can be ordered from our Customer Services team.

Subscriptions

Our range of subscription services are designed to make using standards easier for you. For further information on our subscription products go to bsigroup.com/subscriptions.

With **British Standards Online (BSOL)** you'll have instant access to over 55,000 British and adopted European and international standards from your desktop. It's available 24/7 and is refreshed daily so you'll always be up to date.

You can keep in touch with standards developments and receive substantial discounts on the purchase price of standards, both in single copy and subscription format, by becoming a **BSI Subscribing Member**.

PLUS is an updating service exclusive to BSI Subscribing Members. You will automatically receive the latest hard copy of your standards when they're revised or replaced.

To find out more about becoming a BSI Subscribing Member and the benefits of membership, please visit bsigroup.com/shop.

With a **Multi-User Network Licence (MUNL)** you are able to host standards publications on your intranet. Licences can cover as few or as many users as you wish. With updates supplied as soon as they're available, you can be sure your documentation is current. For further information, email bsmusales@bsigroup.com.

Revisions

Our British Standards and other publications are updated by amendment or revision.

We continually improve the quality of our products and services to benefit your business. If you find an inaccuracy or ambiguity within a British Standard or other BSI publication please inform the Knowledge Centre.

Copyright

All the data, software and documentation set out in all British Standards and other BSI publications are the property of and copyrighted by BSI, or some person or entity that owns copyright in the information used (such as the international standardization bodies) and has formally licensed such information to BSI for commercial publication and use.
