

Help for VAG-Screensavers

On our UseCAD[®] 6.0 you will find a selection of various VAG screensavers.

To install a VAG screensaver, first click on the desired selection and then follow the instructions. After completing the installation, click directly on your desktop using the right mouse key. A window will open and there you select the function “Properties”. Then select the item “Screensaver”.

Here you can select the screensaver you have just installed. After selecting it, click on the “Adopt” button. This action will take over the VAG screen saver as a standard.

For proper display of some screensavers you will need a flash player. You can download this flash player free of charge from the internet at www.adobe.com . As a rule a flash player is usually pre-installed on all recent PCs.
